QUESTION OF : **MUSTERING POLITICAL WILL TO TACKLE CLIMATE
CRISIS AND STRENGTHEN INTERNATIONAL CLIMATE
REGIME**

The General Assembly,

Emphasizing that mild temperatures are affecting the glaciers and thus resulting into flood and erosion of coastal areas of countries,

Bearing in mind that governments lack the drive and willingness to opt for long term solutions due to short-sightedness thus pushing decision-making towards less sustainable policies,

Alarmed by the fact that carbon dioxide is being released every second worldwide which causes a rise in temperature by more than 3°C,

Noting with regret that the increase of human invasion on wildlife habitats is accounting to the notorious loss of biodiversity that is threatening food security, population health and world stability,

Further recalling that there are millions of people who expect their leaders to act in the interests of all, and who are increasingly dismayed that the global economic system threatens everyone's future,

Commission : Environment
Session : Zonal MUN 2019 (Zone 3)
Sponsors : Bangladesh, Belgium, Bolivia, Croatia, Finland, France,
Germany, Kuwait, Nepal, Peru, Poland, United States of
America

1. Urges that countries control the manufacturing of import and export of a range of ozone depleting substances and synthetic greenhouse gases;

2. Further recommends providing micro-finance loans and subventions from government to be granted to families for the purchase of renewable equipment;

3. Demands that appropriate bodies put forward legislatives whereby industries should use filters which reduce carbon emission by 70 % to minimize pollutant emission in accordance with international targets to combat climate crisis;

4. Encourages developed countries and governments to help developing countries to start and set up training centers and seminars to raise awareness of how to reduce their daily carbon footprint;

5. Expresses its hope that governments adopt a much faster and stronger climate action at national level to build climate resilience and reach sustainable development goals;

6. Urges all nations to protect coastal regions by reducing pollution and investing in waste management in countries to effectively deal with pollution

7. Recommends the installation of advanced technological instruments such as UNFCCC Technology Executive Committee to better predict natural calamities and to be able to take relevant actions beforehand;

8. Appreciates that the Paris Climate Agreement extends the promotion of carbon tax to reduce greenhouse gases and also to strengthen climate change adaptation methods;
