Precautionary measures to prevent breeding of Mosquitoes

Mosquitoes are responsible for causing fever, influenza and similar diseases. It is therefore recommended to adopt the below precautionary measures so as to prevent the breeding of mosquitoes.

These measures include the following:

- Drainage of water that may be accumulated on roofs;
- Ensure that all water tanks/ containers are always properly covered;
- Replace regularly, at least once a week, water in flower pots;
- Dispose of all materials liable to breed mosquitoes; and
- Ensure permanent cleanliness of yards and other unoccupied places in the neighbouring areas.
